Water Lab Draws Wide Media Coverage | College of Engineering

06/24/2017

June 19, 2017 — Reporters, photographers and video journalists converged at the Utah Water Research Lab on June 16 for an up-close view of the lab's latest project.

Research Professor Dr. Michael Johnson speaks to reporters about the Oroville Dam spillway model at the Utah Water Research Lab on June 16. The project has attracted national media attention.

Research engineers at the UWRL constructed a 1:50 scale model of the main spillway at Oroville Dam where heavy flows damaged the structure earlier this year.

Dr. Michael Johnson, a research professor at the lab, and lab director Dr. Mac McKee spoke with reporters about the Oroville model and the importance of water resources engineering.
