Engineering Tutor Center, Student Spaces Undergo Major Renovation | College of Engineering

07/31/2018

July 31, 2018 — The cramped engineering tutor center is a thing of the past.

Quick Facts: 3rd Floor Remodel

- 915-square-foot Tutor Center — capacity for eight tutors and 34 students
- 450-square-foot student leadership area and eight-seat conference room
- 435-square-foot meal prep and vending space

This summer, the College of Engineering renovated a large portion of the Anderson Engineering Building to accommodate a new 915-square-foot tutor center complete with wrap-around glass dry-erase walls, upgraded lighting, computer work stations and new furniture.

The renovated space also includes a new smaller meal prep and vending area with three vending machines, tables and chairs, sink, counter space and two microwaves. The remodel also created a new headquarters space for student clubs and associations. The new student leadership space will accommodate eight student organizations, each with its own desk, computer and storage space. The new facility will also have a conference room with eight seats.

Construction crews are completing work on the new spaces through early August. The new facilities officially open Aug. 27. The remodel cost approximately $120,000.
