

College of Engineering Welcomes New Graduate Program Coordinator | College of Engineering

09/11/2020

Sept. 11, 2020 — USU's College of Engineering welcomes new graduate program coordinator for the Biological Engineering Department, Aleena Moss. She will be helping with everything from recruitment through to graduation.

“Mostly my job is to make sure that all of our graduate students are on track with their degrees,” said Moss.

Originally from Rexburg, Idaho, Moss graduated with a degree in exercise physiology in December 2019. Her interests include playing Pickleball and spending time with her nieces and nephews.

In addition to being the graduate program coordinator for the Biological Engineering Department, Moss is also the assistant to department head Keith Roper.

Moss met her husband while serving an LDS mission in Costa Rica. The couple enjoy traveling and trying new foods together.

“I’m excited to be at USU and look forward to meeting and working with all the students,” she said.
